

# Space technology inputs toward achieving Sustainable Development Goals (SDGs) - National priority issues

Access to space and associated technology is the key driver - especially to meet the future challenges on **Environmental and Economic Growth**.

Earth Observations directly address almost all 17 SDGs - focus is the two pillars **Environmental and Economic Growth** : mainly for SDGs on **climate action, life on land and, responsible consumption and production**.

GNSS integrates and accelerates all three pillars of SD: **Economic Growth, Social Inclusion, and Environmental Sustainability**. They enable provision of services are key for the achievement of SDGs, such as: **industry, infrastructure and, sustainable cities and communities**.
