

Approach to India's Space Policy

Use of Space technologies to solve India's social and economic problems.

Space based applications to address specific problems

Customised satellite platform carrying multi-purpose payload

Initial Years

Indigenous spacecraft

Indigenous Launch systems

Capacity Building

SATCOM policy in 2000

Remote Sensing Data Policy in 2001 and revised in 2011

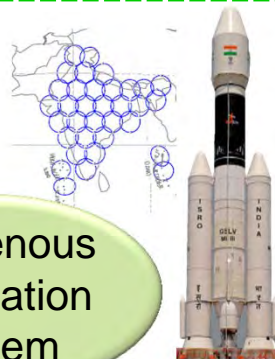

Recent Years

Operational Communication and Earth Observation systems

Low cost access to Space through customized options

Indigenous Navigation system

Outer Space Missions

Private sector participation

Greater focus on indigenous efforts in space infrastructure establishment

Continue to Collaborate, Co-ordinate and Co-operate with other space agencies of the world

Contribute for space science activities

Working towards updating to the existing policy framework and bringing in national space legislation to support further growth
